

Growing Spiritual Capacity with Nature Based Regenerative Tech and Localized Belonging Programs

This document is created to communicate [more of my vision](#) in hopes of finding collaborators, funding, advisors and [co-creators](#)! Thank you for your interest!

FAQ

What is a short description of your vision?

I have a dream to build a [regenerative tech stack](#) based "force field," based on entirely new model, to create a safe and open source modeled container, to collaboratively create foundations for a future bioregional based, regenerative human experience and economy that becomes planet positive, life affirming in service to human and non-human life. With a safe incubator container, we can model a future world, while we trial emergent and novel technologies and programming, built with intentionality to scale out via a novel Commons Global Alliance, in a place based collaboration in the Bay Delta Bioregion.

How would you categorize your vision?

Categorization is not applicable to a systems based vision dependent on complexity, interconnectedness and relationships so my preference is to avoid categorization. That said, I also aim for comprehension so if pressed I would say it is a complex foundation for unimaginable possibility based on **technology and ecological community building**, and includes increasing circularity for food and water supplies while providing localized and programmatic edible front yard gardens and more.

Please describe your vision using non-expert language.

I want to co-create the design of a pilot in the Bay Delta bioregion to allow us to beta technology and community programs, based on a regenerative tech stack, that becomes our "force field," creating a safe and open container, to collaboratively create foundations for a bioregional based, regenerative human experience and

Growing Spiritual Capacity with Nature Based Regenerative Tech and Localized Belonging Programs

economy.

The pilot could:

1. **Begin** the world's first URBAN transformation to a new way of living in the Bay Delta Bioregion, with intention to become a bioregional based, regenerative economy.
2. Provide a **safe and open container** to develop, trial and road test new ideas and established projects within the container/project area and safe from the impacts of our toxic modernity container.
3. **Create a “plug and play” framework** with values for impact, for any project like a Google App in the Google store.

The pilot aims to address toxic othering, ingrained in modernity, via tech and programs to foster “Belonging Without Othering” for human life and non-human life. The programming, supported by technology, creates opportunities for participants to reconnect to biology, humanity and spirituality via growing, harvesting and savoring food with neighbors and much more.

What is the specific environmental problem that your work addresses?

Climate, which garners far too much siloed and reductionist thinking funding, is a symptom of the toxic human economy built upon many lifetimes of human civilizations where scarcity, efficiency, inequity and othering are foundational.

My vision is to address “othering,” the deepest root that needs eradicating. My vision is to foster conditions for humans to return to first principles, which include the undeniable truth that Humans ARE nature. We cannot other nature anymore than we can other ourselves. To do so would be suicidal.

I argue the human predicament is a symptom of our suicidal tendencies ingrained in modernity but with history dating back to the invention of the plow, if not further. This massive vision addresses all of it. This is a systems based co-creation honoring

Growing Spiritual Capacity with Nature Based Regenerative Tech and Localized Belonging Programs

complexity science and prioritizing relationships, connections, community and equitable valuations of all life, human and non-human.

What is the total environmental benefit if fully scaled?

The vision is to build a new human model based on what matters, which I believe to be protecting our planet while living in a new way, built upon new pillars, new systems and new ideas that have nothing to do with earning monetary value from speculations on monetary value. The vision is to no longer waste time and precious resources playing a zero sum game, that is rigged by the corrupt system, and the winners of wars and dominators of cultures, where the average person in the top 10% owns nearly 3,000 times the wealth of the average person in the bottom 10%.

The vision includes accepting the old way of creating and sharing ideas and work, that eventually impacts policy, leading to changes in governance, legislation, regulation, case law and more is far too slow. The modernity container is far too corrupt to allow a new model to be born via the old way.

We must change course and accept that our talking about what to do is not leading to the outcomes we seek. We must start building a new model, with new tools, so others can grow the wisdom and compassion and spiritual capacity to imagine a new way like we do.

We must accept that the notion of building islands of coherence will not lead to the change required, in the time that remains, given the state of our world. As evidenced by the U.S. election, we MUST reach the lost and disconnected, the disenfranchised, the working classes and offer them hope. We must offer purpose and service while ensuring basic needs are more than met. We must ensure that passions are allowed to thrive when our new model matches their offers to meet the world's needs at a bioregional level. The vision is to foster bioregions to create **meadows of coherence**, that grow together to form a unified and decentralized mycelial network. To date there is no central unification for such a network that is not deeply ingrained in the toxic modernity container (ie - Linked In).

Growing Spiritual Capacity with Nature Based Regenerative Tech and Localized Belonging Programs

The vision is to build a new model that scales out, via the Bioregionalism Movement and eventually, if we build a better model, more humans will come. If we build a novel framework for the “force field” we can invite everyone to join the new Alliance and allow the regenerative tech stack provisioning process to determine admittance level, and any transformation pathways needed to be accomplished first.

We can trial this new system for the project area to allow those community members to join and participate in a provisioning process that gathers data based on:

Place: Participants input to our system, once run through our AI, results in enormous data associated with them.

→ Bioregional data for their place

- ◆ Watersheds
- ◆ Geology
- ◆ Climate history
- ◆ Biodiversity
- ◆ Etc.

→ Geopolitical data for their place

- ◆ Geopolitical membership (city, county, state, country)
- ◆ Land use
- ◆ Land history and Indigenous rights
- ◆ Land types (brownfield, greenfield)
- ◆ Land ownership (private, public and if public which geopolitical groups like federal/state/county)

Impact Assessment: Participants input to our system, once run through our AI, results in a value for each area with parameters for negative impact, neutral impact and degrees of positive impact for the following:

Growing Spiritual Capacity with Nature Based Regenerative Tech and Localized Belonging Programs

→ **Planet Protection** (input solicited for areas of interest, work, and expertise)

- Climate
- Biosphere
- Land
- Freshwater
- Biochemical flows
- Oceans
- Atmosphere
- Stratosphere
- Novel Entities

→ **Regenerative Economy** (input solicited for areas of interest, work, and expertise and this one requires far more thought and mapping)

- Abundance
- Sufficiency
- Equity
- Belonging

Once built and operational and with participant data, the new model provides incredible mapping and synthesization of our work and creates unimaginable resources and possibilities including creating entirely new ways to flow capitals, resources and distributions of bioregional abundance.

What environmental benefit could your solution deliver in 5 years?

Orchestrated, bioregional based programming supported by tech, to foster conditions for neighbors to get outside together and grow food could lead to unimaginable possibilities. With food, communities also grow the wisdom, compassion and spiritual capacity to imagine a new way of living. These programs also increase emergency preparedness, community resilience and localized circularity for food and water supplies.

What social benefit could your solution deliver in 5 years?

Growing Spiritual Capacity with Nature Based Regenerative Tech and Localized Belonging Programs

The modernity container (meaning the current human economy) is not supportive of growing the magnitude of change required AND by creating an alliance we can save lives and help communities (BIPOC, LGBTQ, Working Class, Unhoused, Mentally Ill, Women, and more) in need of better support.

What are the key barriers for scaling?

The vision needs co-creators, funding, advisors and collaborators. With funding we could be off and running. With advisors and collaborators we might just succeed in reaching the Great Turning before my 13 year old daughter can't imagine her adult life on our planet.
